Age: 6 months

**CONSENT**  
 Written Consent On Chart  
 Consent Unobtainable Due To Patient Condition  
 Verbal Consent Obtained

---

**PRE-OXYGENATION**  
 100% NRB  None oral airway in place

---

**PRE-MEDICATION**  
 • Defasciculating Meds:  Narcuron /  Pavulon / Other: None Dose: \_\_\_\_\_  
 • Other Meds:  Lidocaine /  Atropine /  Esmolol / Other: None except code med

---

**SEDATION**  
 None  Thiopental (Pentothal™)  Fentanyl (Sublimaze™)  Midazolam (Versed™)  
 Ketamine (Ketalar™)  Propofol (Diprivan™)  Etomidate (Amidate™)  
 Other: \_\_\_\_\_ Dose: \_\_\_\_\_

---

**PARALYSIS**  
 None  Succinylcholine Other: \_\_\_\_\_ Dose: \_\_\_\_\_

---

**INTUBATION**  
 • A 5.0 mm ET Tube was inserted:  Orally  Nasally  
 First Attempt  Second or Third Attempt  > Third Attempt  
 Other: \_\_\_\_\_  
 If unsuccessful, elaborate Could hear B/L breath sounds  
 • Sellick Maneuver was done throughout paralysis:  Y  N but also in abdomen  
 • There was symmetric chest rise and BBS post-intubation:  Y  N Xray not there @ time  
 • CO<sub>2</sub> indicator used for confirmation:  Y  N Results:  (+) CO<sub>2</sub> Return Other: so tubes pulled & bag  
 • Pulse Oximetry post-intubation was \_\_\_\_\_ % continued for insured aeration  
 • The ET Tube was taped at \_\_\_\_\_ cm at the lips  
 • Post-intubation CXR confirmed good tube location:  Y Other: \_\_\_\_\_  
 • The patient tolerated the procedure:  Well  Adequately  Poorly

---

**COMPLICATIONS:**  None  Dental Trauma  Aspiration  Esophageal Placement  
Child intubated by Dr. Caddle  
4.5 ET Tube orally

---

MRN

Name: BRITT, CHLOE

Age: 6 months

NG Tube: Using 8 French Feeding tube I passed tube down child's Nare. No complications. No gastric contents initially but there was drainage from stomach through tube into cup later. These stomach contents were later given to Police Dept.

5 French Feeding tube used for a Foley cath. Vaginal area cleared & tube passed easily. Assisted by Pat Murphy. No complications.

"Vaginal Area clear +  
Tube passed easily.  
Assisted by Pat  
Murphy. No  
complications."  
NO mention of trauma  
to genital area.

PA/ARNP:

"there were retinal hemorrhages B/L, child's anal opening was dilated approximately the size of a quarter. There was a tearing of the perianal tissue including anal sphincter muscle."

MRN

Name: BRITT, CHLOE

Age: 6mth

On initial exam child had no heart sounds, no pulse, no spontaneous respirations, cyanotic & blue color face around mouth. I did mouth to mouth until child could be bagged. ACLS/PALS protocol initiated. See attached addendum sheets.

Presence of Blood is NOT noted.

On exam I noted bruising of forehead. There was also bruising of B/L thighs & chest. Child's tracheum was torn. Pupils were fixed & dilated. There were retinal hemorrhages B/L. Child's anal opening was dilated approximately the size of a quarter. There was tearing of the perianal tissue including anal sphincter muscle.

Later notes detail child's case & improvement in EKG. We were preparing to transfer the child to the CT scanner for a CT head scan. The child's heart rate dropped to 40's, cardiac monitor showed sinus bradycardia. Her BP T to 117/52. Within minutes the child's face began to swell then her entire head was noted to swell & her fontanelles were bulging & firm. Clear fluid was running from child's nose. Child pronounced dead 22:50 by Dr. Van & agreement from Dr. Cade and myself.

ON-TARGET RELIEF

John  
I think you have this for copy but I highlighted some things you should know. James
